SALMAN SHAFI

Ottawa, ON (open to remote across Ontario) | salshafi44@gmail.com | github.com/salshafi | linkedin.com/in/salmanshafi44

SUMMARY

Seeking a 4-month remote co-op, January–April 2027 (flexible start date; remote or Ottawa only). Software Engineering Technology (AI) co-op student in Semester 3 who builds REST APIs in Python and C#, writes multithreaded Java with JDBC, and automates tasks on Linux with Bash. Self-taught in SQL and databases, with a long-term goal of AI/ML engineering.

TECHNICAL SKILLS

- **Languages:** Python, Java, C#, JavaScript (ES6), SQL, HTML/CSS
- **Backend:** FastAPI, SQLAlchemy, Pydantic, ASP.NET Core Web API, Entity Framework Core, JDBC, REST API design, SQLite, pytest
- **Linux & Automation:** Ubuntu (VM), Bash scripting, cron, grep (regex), sed, awk, find, Apache/MySQL via XAMPP
- **Tools:** Git/GitHub, VS Code, Eclipse, React (Vite), Gemini API
- **Currently learning:** Node.js/Express, MongoDB, JWT authentication, Docker, cloud fundamentals

PROJECTS

job-tracker-api | Python, FastAPI, SQLAlchemy, SQLite, pytest — github.com/salshafi/job-tracker-api

- Built a REST API with full CRUD, status filtering and partial updates (PATCH), using Pydantic validation that returns 422 on bad input.
- Added an AI assistant endpoint that uses the Gemini API to answer questions about a user's applications, with the API key kept server-side.
- Wrote 27 pytest tests against an in-memory database, plus CORS support, interactive API docs and a README.

Java Transaction Engine | Java SE, JDBC, SQLite, ExecutorService — github.com/salshafi/java-transaction-engine

- Built a console app that processes a batch of financial transactions concurrently on a fixed pool of 3 worker threads.
- Saved transactions to SQLite through JDBC using parameterized PreparedStatement queries.
- Applied OOP design: an interface with an implementing class and a custom InsufficientFundsException that rejects over-limit transactions.

GradeTracker | C# Web API, EF Core, SQLite, JavaScript — github.com/salshafi

- Built a C# Web API with Entity Framework Core and SQLite, plus a JavaScript front end.
- Wrote a shell setup script to automate setup; fixed compile and URL bugs and added a .gitignore.

Linux Text Processing & Cron Automation | Bash, grep, sed, awk, find, cron — COMP301

- Used grep (basic and extended regex), sed (in-place edits with backups) and awk (field filtering, counting).
- Scheduled a recurring job with cron using a safe crontab edit workflow; fixed Windows CRLF line-ending errors with sed.

EDUCATION

Software Engineering Technology – Artificial Intelligence (Co-op) — Winter 2026 – Present

Centennial College, Toronto, ON (online) | Currently in Semester 3

- **Current courses (Fall 2026):** Web Application Development (COMP229, MERN), Java Programming (COMP228), Introduction to AI (COMP237), Linear Algebra & Statistics
- **Completed coursework:** Python, Linux Shell Scripting (COMP301), C# OOP (COMP123), Client-Side JavaScript (COMP125)

EXPERIENCE

Customer Service Associate (Self-Checkout) – Independent Grocery Store — 2018 – 2021

- Troubleshot scanning and payment errors across multiple self-checkout stations at once.
- Verified age-restricted purchases, handled voids and overrides, and de-escalated frustrated customers.
